

AERSTONE

AerStrike™

Remote VPN Appliance

DESCRIPTION

AerStrike™ is a small customized VPN appliance, roughly the size of a brick, designed to support remote penetration testing activities. The device comes in a soft shell padded case, and may be shipped to remote locations either temporarily or permanently in advance of pentesting activities. The device is dual-homed: one NIC connects to the target network, and the other NIC to a corporate VPN concentration point (either over a corporate WAN or the public Internet, as required). The device comes standard with the freeware Kali Linux suite of pentesting tools, and may be customized to meet specific customer requirements. Upon deployment, the appliance automatically initiates a reverse VPN connection back to the VPN endpoint; this outward-facing NIC does not expose any ingress ports or services. Centrally-located testers may then use the AerStrike™ device as a bastion host for local testing. After testing, each device may be shipped back for re-imagining and re-deployment.

BENEFITS

- Simulates onsite presence by remote testers
- Eliminates tester-related travel expenses
- Removes need for firewall reconfiguration (in most cases)
- Full featured server with full suite of penetration testing software
- Supports on-device testing, as well as network pass-through testing
- Supports both wired and wireless connectivity

SPECS

- Intel Celeron, dual-core 1.6 GHz
- 8GB DDR3 SDRAM
- 500GB SSD
- Dual Gigabit NICs
- Built-in WiFi support
- HDMI (x2), VGA, COM, Mic In
- USB 2.0 Ports (x4)
- Size: 4.4 lbs, 5.31" x 5.04" x 1.89"
- Soft shell padded case
- Kali Linux pentesting suite onboard

Our Experience Sets Us Apart

Aerstone approaches each engagement with a combination of professionalism, determination, and creativity honed by years of working with security professionals throughout the military, government, and commercial sectors. More than just a cybersecurity services vendor, Aerstone develops enduring customer relationships and helps build long-term client value through security process improvement.
